

# Construction Waste Recycling Ordinance (C.B. 117657)

## Attachment: Recent Stakeholder Feedback (2010 – 2011)

### 2010 SPU Construction Waste Stakeholder Forums

SPU Proposal	Stakeholder Response	SPU Action
Disposal ban on asphalt paving, bricks and concrete	Stakeholders supported since already being reused or recycled at very high level	Ordinance # 123553 prohibits disposal of recyclable concrete, bricks and asphalt paving effective January 1, 2012
C&D Facility Certification	Stakeholders supported	Sponsored study with King County to sample residual from processing and establish other criteria for certification
Mandatory Recycling and Reporting for all DPD building permit applicants before receiving a Certificate of Occupancy	Construction contractors opposed since it takes a while to receive all project documentation	Did not proceed further with setting recycling targets per job site with report due before Certificate of Occupancy issued
Sorting all C&D waste before disposal	Proposal from a stakeholder which puts the emphasis on facilities and not as much on what happens at individual job sites	Further analysis along with landfill disposal ban options

### 2011 Solid Waste Plan Stakeholder Input and Responses

SPU Solid Waste Plan Recommendation	Stakeholder Response	SPU Proposed Action to Stakeholder Response
Citywide C&D recycling goal of 70% by 2020	Achievable since Seattle C&D recycling level already above 60%	Resolution adoption of a Citywide C&D recycling goal
Certification of C&D processing facilities	Supported by all groups particularly if coordinated with other government agencies	Ordinance proposal for certification process with Administrative Rulemaking  Continued coordination with other jurisdictions
Disposal bans on readily recyclable C&D commodities	Supported with need for flexibility due to volatility of end markets for certain materials such as wood waste	Ordinance proposal with staggered implementation for wood waste and asphalt roofing.
Project recycling reports due after getting a Final Permit	Supported by contractor if adequate time granted and no link to the Certificate of Occupancy	Ordinance proposal – submittal due 60 days post Final Permit
Other input – market development	Stressed importance of market development for targeted commodities and public agency procurement of materials with recycled content	Continuation of focus on carpet, plastic film, wood and tear-off asphalt shingles as well as focus on procurement of recycled content materials in City purchasing
Other input – space limitations	Many Seattle job sites space constrained so allow for a one-box option for all C&D	Would allow if hauled by City designated C&D waste hauler and delivered to certified processor permitted to accept mixed waste loads
